EXPERIENCE

Backend Engineer Intern   **April 2025 - Dec 2025**
Google   Mountain View, California

- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.

- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.

- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.
- Implemented concurrency-heavy backend systems and validated throughput under sustained load.

PROJECTS

Space Invaders Game (Go)   **2024 - 2025**

Golang
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.

- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.
- Implemented worker-pool pattern for concurrent processing and performance comparison.

TECHNICAL SKILLS

Languages: Java, Golang, Python
Frameworks: React, Node.js, PyTorch
Developer Tools: Git, Docker
